

## 2018 HGF – GSI – OCPC – Programme

### For the involvement of postdocs in bilateral collaboration projects

<b>Part A:</b>
<b>Title of the project:</b>
Fundamental Physics with Magnetic Resonance
<b>Helmholtz Centre and institute:</b>
Helmholtz-Institute Mainz (HI-Mainz)
<b>Project leader:</b>
Prof. Dr. Dmitry Budker Matter-Antimatter Asymmetry (MAM) Section Leader E-mail: budker@uni-mainz.de Phone: +49 - 6131 39-29630; Fax: +49 - 6131 39 29660 Mobile: +49 - 174-34281 373
<b>Web-address:</b>
<a href="http://www.him.uni-mainz.de">www.him.uni-mainz.de</a>
<b>Department:</b> (at the Helmholtz centre or Institute)
CBM – Compressed Baryonic Matter
<b>Contact Information:</b> (Email, telephone and telefax)
Dr. Pradeep Ghosh Program Coordinator GSI Helmholtzzentrum für Schwerionenforschung Planckstrasse 1, 64291 Darmstadt Email: <a href="mailto:International@gsi.de">International@gsi.de</a> or <a href="mailto:Pr.Ghosh@gsi.de">Pr.Ghosh@gsi.de</a> Telephone: +49 – 6159 71 3257, Fax: +49 – 6159 71 3916
<b>Description of the project :</b>
<p>Our research group at the Helmholtz Institute of Mainz focuses on testing fundamental symmetries of nature in experiments that utilize the methods of atomic, molecular, and optical physics. The group has experience in designing and conducting precision experiments using a variety of techniques, including high-sensitivity magnetometers, and applying them to important problems.</p> <p>We would like to offer the following vacancies in our various projects. A detailed description for these projects can be found on the group homepage (<a href="https://budker.uni-mainz.de/">https://budker.uni-mainz.de/</a>).</p> <ul style="list-style-type: none"> <li>• Magnetometry with diamond color centers for fundamental physics</li> <li>• Dark matter: the CASPER experiment (Cosmic Axion Spin Precession Experiment)</li> </ul>

- Dark matter: the GNOME experiment (Global Network of Optical Magnetometers for Exotic physics searched)
- Magnetometry for antimatter experiments
- Fundamental physics experiments with dysprosium atoms
- Zero- to Ultra-low field Nuclear Magnetic Resonance (ZULF NMR)
- Parity violation in ytterbium
- Cavity-enhanced chiral polarimetry
- Physics and applications of sodium laser guidestars (LGS)

All of these projects are tightly integrated with many other current projects in our group and collaborators from other groups at Mainz, elsewhere in Germany, and all over the world. This facilitates exchange, learning and a fast experimental progress. Furthermore, we offer an innovative, well-equipped and scientifically stimulating environment and a broad range of training opportunities.

**Description of existing or sought Chinese collaboration partner institute:**

We have existing collaborations with several institutions in China, including USTC (Hefei) and Peking University (Beijing).

**Required qualification of the post-doc:**

- PhD in Physics
- Strong background in experimental and theoretical atomic physics, laser physics,
- NMR
- Good programming skills: MATLAB, Labview, C or C++
- Language requirement: Proficiency in written and spoken English
- Being comfortable in interacting with colleagues in an interdisciplinary setting

**Part B:**

**Documents to be provided by the post-doc:**

- Detailed description of the interest in joining the project (motivation letter)
- Curriculum vitae (CV)
- copies of degrees as a proof of education qualification
- List of publications
- 2 letters of recommendation

**Part C:**

**Additional requirements to be fulfilled by the post-doc:**

- PhD degree not older than 5 years
- Very good command of the English language
- Strong ability to work independently and in a team
